

ASIS JOVIN A

Cloud Engineer | AWS · Azure · GCP · Kubernetes · Docker · Terraform · Ansible · Python · ELK · CI/CD · Hybrid Cloud

+91-9791246593 | asisjovinfernando2003@gmail.com | Hyderabad, India

PROFESSIONAL SUMMARY

Cloud Engineer with 1+ year of hands-on experience designing, deploying, managing, monitoring, and automating large-scale cloud infrastructure across AWS, Azure, and GCP for mission-critical SaaS platforms. Automation-first mindset — builds tools and scripts (Python, Bash) to make platform operations efficient, reliable, and reproducible. Deep expertise in container orchestration (Kubernetes CKA certified, Docker), Infrastructure as Code (Terraform HashiCorp certified, Ansible), and full-stack observability (ELK Stack, CloudWatch, Prometheus, Grafana). Experienced in CI/CD pipeline engineering, Linux/Windows server administration, and client-facing technology consulting. Comfortable delivering cloud solutions for domestic and international clients — strong verbal and written communication with a proven track record in cross-functional collaboration. Azure DevOps certified; Oracle Gen AI Professional certified.

TECHNICAL SKILLS

AWS EKS, ECS, EC2, VPC, RDS, Lambda, S3, IAM, CloudWatch, ELB — core services & container workloads	Azure AKS, VM, VNET, NSG, Monitor, AD/MFA, DevOps, Blob, App Services, Key Vault — primary cloud platform
GCP GKE, Compute Engine, Cloud Storage, Cloud Build, IAM, VPC, Cloud Monitoring — growing expertise	Kubernetes / Docker CKA certified; AKS/EKS/GKE, Helm, RBAC, HPA, Docker multi-stage builds, Docker Compose, registries
Terraform / Ansible HashiCorp certified; multi-env IaC modules, Ansible playbooks, config mgmt, drift prevention	Python / Bash / Java Automation tooling, API scripts, deployment helpers, health checks, compliance reporters, REST APIs
ELK / Monitoring ELK Stack, Prometheus, Grafana, CloudWatch, Azure Monitor — log aggregation, dashboards, alerting, RCA	CI/CD GitHub Actions, Azure DevOps YAML, Jenkins, GitLab CI — full pipeline design, quality gates, automation
Linux / Windows RHEL, Ubuntu — admin, hardening, patching; Windows Server, Active Directory, Group Policy, PowerShell	Nginx / MySQL / MongoDB Web server config, reverse proxy, DB operations — Azure SQL, AWS RDS, MySQL, MongoDB basics

CASE STUDY — REPAYX FINTECH: LARGE-SCALE HYBRID CLOUD ENGINEERING & FULL AUTOMATION AT SCALE

Challenge:

Repayx, a mission-critical fintech SaaS payment platform operating across domestic and international environments, had no IaC-driven cloud provisioning, no container orchestration standards, no ELK-based observability, no CI/CD automation, no Nginx/web server configuration management, and manual database operations. A complete cloud engineering function was designed, deployed, and automated from zero across AWS, Azure, and GCP hybrid environments.

Engineering Actions:

Cloud Infrastructure Design & Deployment:

- Designed and deployed scalable cloud infrastructure across Azure (primary), AWS, and GCP — Azure AKS, AWS EKS/ECS/EC2/VPC/RDS/Lambda, and GCP GKE/Compute Engine — managing multi-region workloads for Repayx payment processing services.
- Provisioned all cloud resources via Terraform modules (HashiCorp certified) with remote state backends, per-environment workspaces (dev/staging/prod), and enforced tagging/security baselines as code — zero manual cloud console provisioning.

Container Orchestration — Kubernetes & Docker:

- Designed and operated container orchestration across AKS, EKS, and GKE — RBAC, network policies, HPA, Cluster Autoscaler, Helm chart versioning, and zero-downtime rolling deployments for all Repayx microservices.
- Optimised Docker images using multi-stage builds (~35% size reduction); managed container registries; built Docker Compose environments for QA; integrated container image scanning (Trivy) as mandatory CI gate.

Automation Tools & Platform Efficiency:

- Developed Python and Bash automation tooling to make platform operations efficient, reliable, and reproducible — deployment validators, infrastructure health checks, compliance reporters, certificate lifecycle managers, and post-deployment smoke testers.
- Authored Ansible playbooks for configuration management across Linux (RHEL/Ubuntu) and Windows Server nodes — OS hardening, Nginx/web

ELK Stack & Observability:

- Built centralised ELK Stack observability — Logstash pipelines collecting logs from Azure, AWS, and GCP workloads, Elasticsearch indexing with structured field mapping, and Kibana dashboards for real-time log correlation and RCA across all cloud layers.
- Supplemented ELK with Prometheus/Grafana for infrastructure metrics, CloudWatch for AWS-native alerts, and Azure Monitor for platform health — full observability across the hybrid cloud estate.

CI/CD & DevOps Automation:

- Built multi-stage GitHub Actions and Azure DevOps YAML pipelines for all Repayx services — automating build, test, Docker image build, Terraform plan/apply, and deployment to AWS/Azure/GCP with quality gates and automated rollback.
- Collaborated with development teams and international client stakeholders to improve build, test, and release workflows; provided cloud technology consulting in feasibility discussions and architecture reviews.

Nginx, Databases & Security:

- Configured Nginx as reverse proxy and load balancer for Repayx web services; managed MySQL and MongoDB databases for application data — connection pooling, query optimisation, backup scheduling, and schema migration coordination.
- Enforced cloud security across all platforms — Azure AD MFA/Conditional Access, AWS IAM least-privilege, GCP IAM, OS hardening, vulnerability remediation, and compliance audit trail maintenance for SOC 2 evidence.

server configuration, package management, and node drift prevention.

Results:

✓ Multi-cloud infra (Azure/AWS/GCP) 100% provisioned via Terraform IaC	✓ K8s: 99.9% uptime SLA — AKS/EKS/GKE with HPA & zero-downtime deploys
✓ ELK Stack: full hybrid cloud observability — RCA time cut significantly	✓ CI/CD: release cycle days → <2 hrs across all cloud environments
✓ Docker optimisation: ~35% image size reduction across all services	✓ ~60% manual ops reduction via Python/Bash/Ansible automation tooling

WORK EXPERIENCE

- DevOps / SRE Engineer** · Viveja IT Service, Hyderabad

Nov 2025 – Present

Project: Repayx — Fintech SaaS Platform | AWS (EKS/ECS/EC2/Lambda) · Azure (AKS) · GCP (GKE) · Terraform · Ansible · ELK · Python · Nginx

 - Designed and deployed scalable cloud infrastructure across Azure, AWS, and GCP — AKS, EKS, ECS, EC2, VPC, RDS, Lambda, GKE, Compute Engine — all provisioned via Terraform modules with remote state and per-environment workspaces.
 - Operated container orchestration across AKS/EKS/GKE — Helm charts, RBAC, HPA, Cluster Autoscaler, rolling updates; optimised Docker images with multi-stage builds (~35% size reduction); Docker Compose for QA environments.
 - Built ELK Stack observability (Logstash, Elasticsearch, Kibana) for centralised cross-cloud log aggregation and RCA; supplemented with Prometheus/Grafana metrics, CloudWatch, and Azure Monitor for full hybrid cloud visibility.
 - Developed Python and Bash automation tooling for deployment validation, health checks, compliance reporting, and operational efficiency; authored Ansible playbooks for Linux/Windows configuration management, Nginx setup, and OS hardening.
 - Built GitHub Actions and Azure DevOps YAML CI/CD pipelines automating build, test, Terraform plan/apply, and multi-cloud deployment; enforced security — Azure AD MFA, AWS IAM least-privilege, GCP IAM, container scanning.
 - Provided cloud technology consulting to domestic and international stakeholders in feasibility and architecture discussions; delivered client-facing cloud infrastructure solutions with clear verbal and written communication.
- DevOps & Backend Developer Intern** · Boston Nex Tech, Chennai

May 2025 – Sep 2025

 - Managed Azure VM and AWS EC2/ELB/S3/RDS cloud infrastructure; built Azure DevOps CI/CD pipelines; wrote Python and Bash automation scripts; gained hands-on experience with Kubernetes manifests, Docker deployments, and Nginx configuration.
- Data & Automation Analyst Intern** · Prowesstics, Chennai

Jul 2023 – Aug 2023

 - Developed Python and SQL automation scripts for operational data workflows; validated data quality; contributed to process documentation — building strong scripting, cloud automation, and analytical foundations.

EDUCATION & CERTIFICATIONS

- B.Tech – Artificial Intelligence & Data Science**

Karpaga Vinayaga College of Engineering & Technology, Chennai

2021 – 2025 | CGPA: 7.6
- Certifications**

 - Kubernetes – CKA Certified
 - Terraform – HashiCorp Certified
 - Azure DevOps Engineering
 - Azure Data Engineering
 - Oracle Gen AI Professional
